The texture-related shape anisotropy of cup drawn metallic sheet parts is referred to as earing or ear formation. It is a characteristic phenomenon associated with the crystallographic texture and the resulting elastic-plastic anisotropy of metals.

1. Introduction. It is quite obvious that selection of a proper material model and determination of its parameters have a great influence on the accuracy and reliability of results of the finite element analysis of rubber articles such as tyres, engine mounts, and rubber bearings.

1. Introduction In this paper we introduce a new method for the analysis of problems governed by partial differential equations such as, for example, solids, structures and fluids.

In signal processing, a finite impulse response (FIR) filter is a filter whose impulse response (or response to any finite length input) is of finite duration, because it settles to zero in finite time.

Introduction & Summary Computer system users, administrators, and designers usually have a goal of highest performance at lowest cost. Modeling and simulation of system design trade off is good preparation for design and engineering decisions in real world jobs.
